Aero Speed collection

Aero Speed

HumanSpeed first introduced the Aero Speed fabric in 2014. You often see this fabric used by riders in the cycling World Tour. The material gives a fantastic aerodynamic fit to the rider and the many channels of the Aero Speed fabric give you excellent flexibility, without losing the slim fitted shape. After 3 months on the market, we had our first “Best in test” award for the bestselling Aero Speed jersey and the Aero Speed bib. We use the Aero Speed fabric in the new HumanSpeed Intelligent line and the Aero Speed line.

Cold black treatment

Cold black treatment is a chemical process added to our “standard” fabric, Thunder bike. The Thunder bike fabric is a non-transparent fabric and is used on all our triathlon and biking shorts in the seating area. The Cold Black treatment reflects the rays of the sun, reducing the heat from the sun by 50%.
