# Clima Speed collection

## **Clima Speed**

An innovative fabric that has a lot of benefits to the modern bike rider or triathlete. Clima speed fabric is extremely fast drying and helps transport the moisture away from your body faster. The fabric is also compressive, giving your core and muscle full support. The Clima Speed products are designed for exceptional performance in race situations so have a slim fitted shape. The structure of the Clima Speed fabric, gives it a water repelling effect, that is 16 times better than standard fabrics seen on the market. Both the HumanSpeed Intelligent line and the Clima Speed line consist of the Clima Speed fabric.

## **Cold black treatment**

Cold black treatment is a chemical process added to our “standard” fabric, Thunder bike. The Thunder bike fabric is a non-transparent fabric and is used on all our triathlon and biking shorts in the seating area. The Cold Black treatment reflect the rays of the sun, reducing the heat from the sun by 50%.

2016104 wmns

- Clima Speed fabric
- Compression woven fabric
- Water repellent fabric, fast drying
- Pockets for gel
- Elastic tri pad
- Slim kompression fit

Sun Reflector - UV Protection

# Learn about HumanSpeed's fabrics

The brand HumanSpeed is based on fully customizable products, all made in Europe. We can play with unique designs, multiple colors and include personalized logos on any of our products. Below we will give our fans an opportunity to learn about our fabrics, to help you locate the specific product that suits your needs and aids your pursuit of optimal performance.

## LYCRA CARBON

Lycra Carbon fibre is one of our new 2017 materials. The fabric contains carbon fibres which give you the full freedom of movement that you would expect from a Humanspeed product but also cools your body down in hot conditions and provides your muscles with support. Lycra Carbon fibre isn't limited to only leg compression, when used in our upper body products it gives your core full support. We use the Lycra Carbon extensively in the new HumanSpeed Intelligent line.

## CLIMA SPEED

An innovative fabric that has a lot of benefits to the modern bike rider or triathlete. Clima speed fabric is extremely fast drying and helps transport the moisture away from your body faster. The fabric is also compressive, giving your core and muscle full support. The Clima Speed products are designed for exceptional performance in race situations so have a slim fitted shape. The structure of the Clima Speed fabric, gives it a water repelling effect, that is 16 times better than standard fabrics seen on the market. Both the HumanSpeed Intelligent line and the Clima Speed line consist of the Clima Speed fabric.

## AERO SPEED

HumanSpeed first introduced the Aero Speed fabric in 2014. You often see this fabric used by riders in the cycling World Tour. The material gives a fantastic aerodynamic fit to the rider and the many channels of the Aero Speed fabric give you excellent flexibility, without losing the slim fitted shape. After 3 months on the market, we had our first "Best in test" award for the bestselling Aero Speed jersey and the Aero Speed bib. We use the Aero Speed fabric in the new HumanSpeed Intelligent line and the Aero Speed line.

## COLD BLACK TREATMENT

Cold black treatment is a chemical process added to our "standard" fabric, Thunder bike. The Thunder bike fabric is a non transparent fabric and is used on all our triathlon and biking shorts in the seating area. The Cold Black treatment reflects the rays of the sun, reducing the heat from the sun by 50%.
