

HUMAN SPEED®

Power Triathlon Line collection

Power Line collection

For 2017, HumanSpeed present their 4th triathlon line. It's called Power tri line. If you are asking for plain soft fabric, with high sun 50+ protection, this line is your answer. We also changed our standard triathlon pad for a new innovative triathlon pad – which we also use in the brand new Intelligent triathlon line. Special for the woman's style is, that the triathlon top and suit without sleeves, have a razorback, which has been requested. We think, that 4 lines should close entire gab of requested items and fulfill every demand for triathlon wear

Cold black treatment

Cold black treatment is a chemical process added to our “standard” fabric, Thunder bike. The Thunder bike fabric is a non-transparent fabric and is used on all our triathlon and biking shorts in the seating area. The Cold Black treatment reflect the rays of the sun, reducing the heat from the sun by 50%.

Peter Nørby
Owner of HumanSpeed
